Universal for all mowing blades.

The “Messerfix” is a universal sharpening tool for all common mowing blades and hedge trimmers. With this sharpening tool, sharpening mowing blades becomes easy for everyone. The mowing blade is clamped in place comfortably using the adjustable holders and does not need to be re-clamped during the sharpening process.

The blades are sharpened by guided movement with the angle grinder. This concept enables enormous time savings compared to traditional manual sharpening tools.

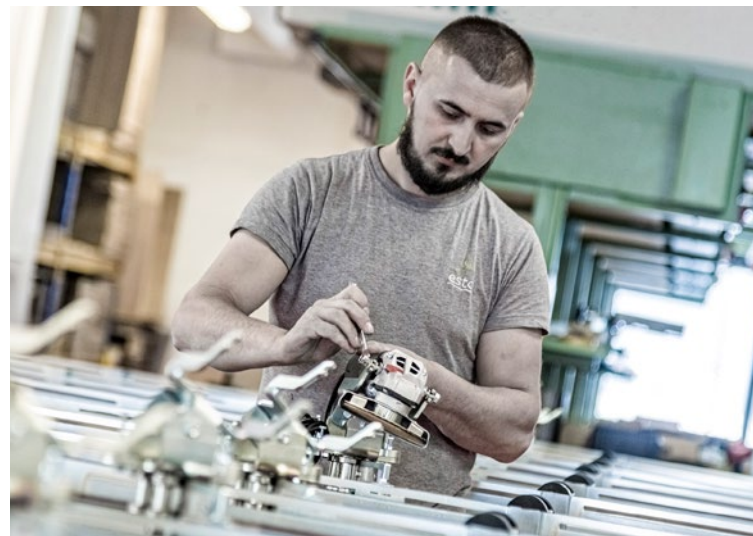

The position wheel on the guide carriage ensures easy handling. It can also regulate the pressure on the blade during sharpening. The play-free guide rails guarantee precise and smooth grinding movement of the angle grinder.

Versatile infinitely adjustable possibilities.

Thanks to the versatile infinitely adjustable settings, all types of mowing blades can be sharpened. Furthermore, the settings for two different types of blades can be “saved” to enable quick switching, for example, from double blades to free-cutting blades.

The robust construction and the use of only high-quality components guarantee low-maintenance and long-lasting operation. All components are connected with screw connections, making them well-prepared for any possible upgrades.

The “Messerfix” universal sharpening tool comes with a high-quality, speed-regulated angle grinder and a special grinding disc. Additionally, the angle grinder has a soft start and overload protection.

Usage – Learn more in our video.
