Climbing aids for better ground traction.

The use of machines in steep slopes and rough terrain poses extreme difficult working conditions and great challenges and risks for people.

With the climbing aids from Esto, we want to contribute to more safety for people and machines.

Quick and easy installation.

On difficult terrain, Esto's climbing aids increase ground traction. Especially in icy and snowy conditions, the climbing aids can protect excavators and tracked vehicles from sliding sideways on steep slopes. Convince yourself of our expertise!

SAFETY in difficult terrain!

The special construction of the climbing aids increases safety against lateral slipping.

Especially in snow, ice, mud, heavy rain and steep slopes, the easy-to-install climbing aids provide better ground traction and thus more stability for chain-driven tracked vehicles.

EASY INSTALLATION without any problems!

Easy and quick installation of two identical components that are screwed together using high-strength bolts.

There are through-holes in the climbing aids to prevent damage to the threads.

Installation and dismantling are trouble-free. If necessary, damaged bolts can be removed by cutting them off with an angle grinder.

PRODUCTION modern & professional!

Our professional design services are the basis for economical and innovative solutions. We work with the latest software technology for the planning and implementation of our projects.

As an experienced specialist in CNC manufacturing, we use the most modern machines for all common processing methods, such as turning and milling. This allows us to meet our high standards of quality and performance.
